TERMS & CONDITIONS

Order minimum is 1 skid. Orders filled from readily-available stock are only available in full skid quantities.

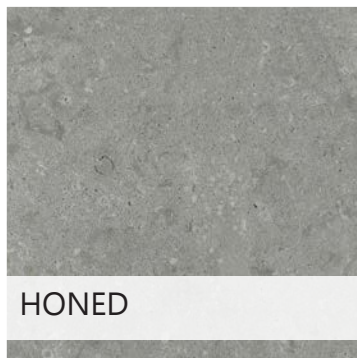

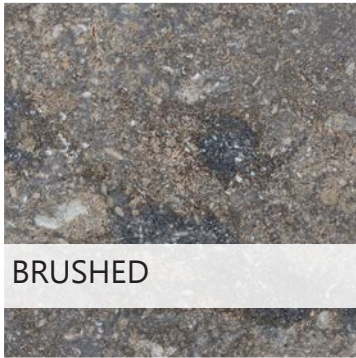

Orders requiring fabrication will be filled based on Purchase Order.

Pattern paving will be packaged 1 size per skid. For blending - call for pricing.

Note: Proper installation and drainage required for medium density limestone in landscape applications. Waterproofing recommended when applied on or below grade. The items on the previous pages are not recommended in areas likely to come in contact with salt as found in ice melting compounds or fertilizers or certain pool chemicals. We do not recommend our stone be installed in places which come in constant contact with soil or in areas of inadequate drainage. Spalling and degradation of stone may occur in extreme freeze/thaw environments with improper installation. It is recommended to use sand, pea gravel or cement base. Do not apply de-icer products to stone as it may cause permanent damage.

MCKENZIE

McKenzie is the darkest gray limestone we offer. Similar to Glacier Grey, the color range and patterns vary in this stone making it a favorite among designers.

CHARACTERISTICS:
Dark and medium gray with occasional taupe.

GLACIER GREY

Glacier Grey is ideal for large panel and paving units. The consistency of the gray tones make it unique amongst domestically quarried gray stone.

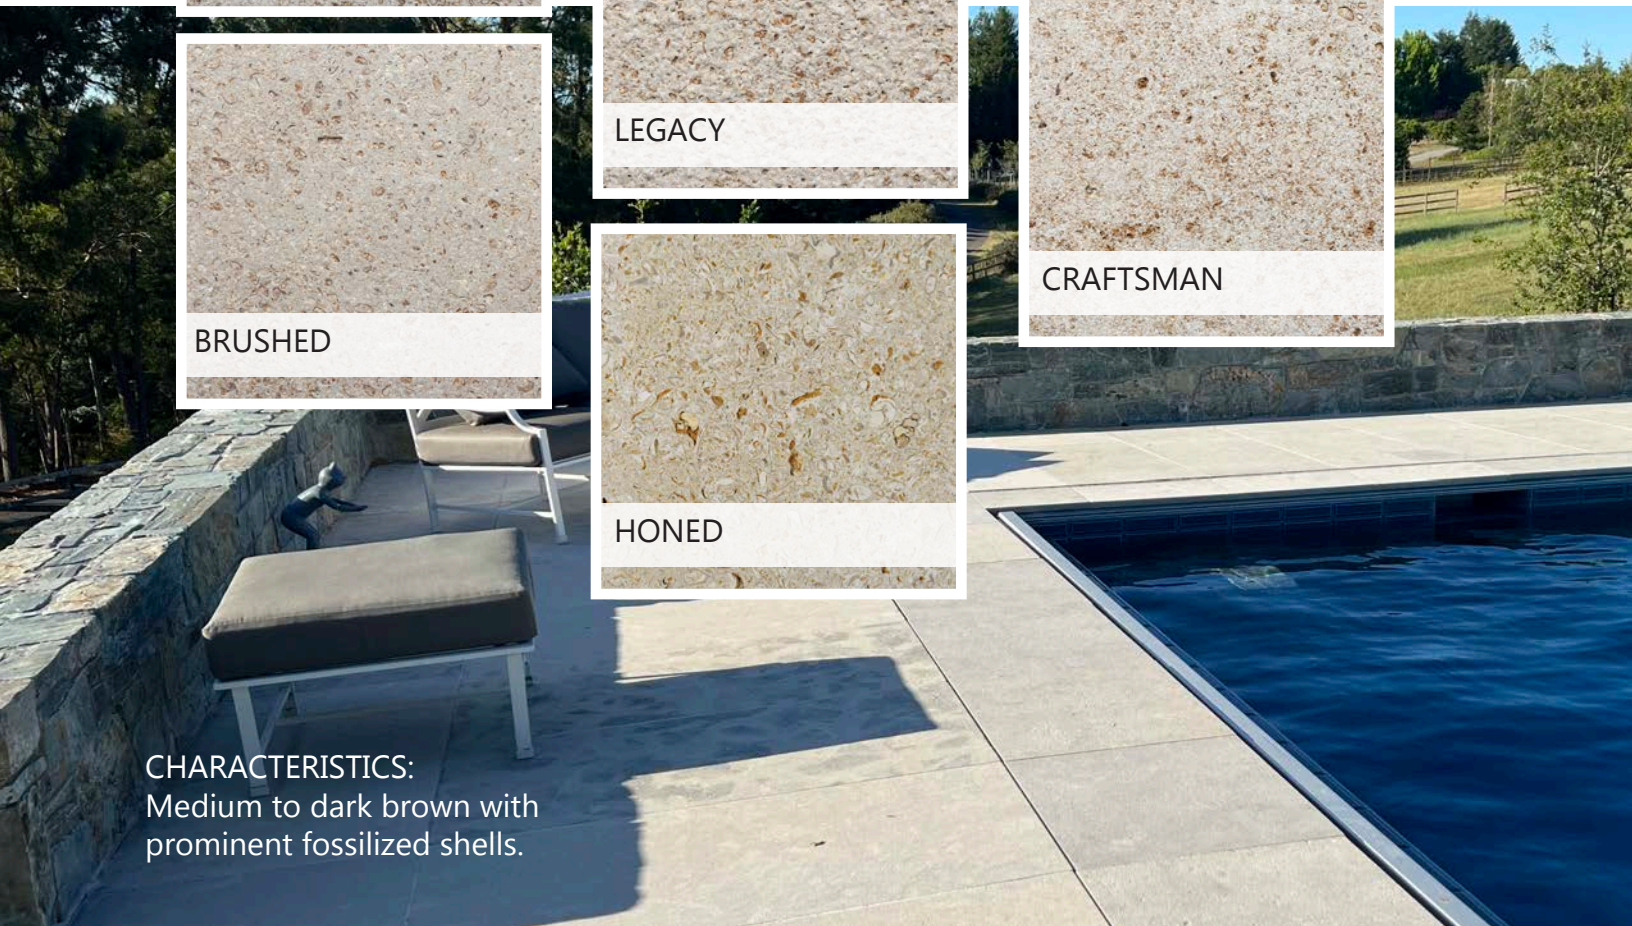

CHARACTERISTICS:
Consistent medium gray color.

PRAIRIE

Prairie is capable of weathering harsh climates making it unique when compared to other dark shell-stones. The texture and color combination make it a favorable option for split veneer.

CHARACTERISTICS:
Medium to dark brown with prominent fossilized shells.

PALOMINO

The unique color range differentiates Palomino from other stone types. It has an overall warm tone and varying grain structure. Palomino is a good option for textured and split veneer but can also give character to any hardscape design.

CHARACTERISTICS:
Gray, cream, gold and bronze.
Varying tight and open grain structure throughout.

LAKESIDE

The inclusions in Lakeside give this stone a patina look. It is very easy to work with and is often used in custom fabrication projects and as a standard split product.

CHARACTERISTICS:
Light cream and gray earth tones.
Texture reveals small, fossilized shells.

SILVERLAKE

Silverlake is one of the most versatile products with a consistent, warm appearance and tight grain structure. It can be used in a range of applications from refined, commercial projects to more rustic, split face restoration projects.

Warm cream and buff to yellow tones
with tight grain structure.

Silverlake Brushed

WILLOW

Willow is extremely versatile and can be fabricated to a variety of styles, finishes, shapes and sizes. Willow is found at the deepest part of the large Willow ledge. The tight grain structure gives this creamy limestone a cool undertone.
